Refraction and Refractive Error

Module Code: OPT4002-B  
Academic Year: 2016-17  
Credit Rating: 20  
School: School of Optometry and Vision Science  
Subject Area: Optometry  
FHEQ Level: FHEQ Level 4  
Module Coordinator: Professor Brendan Barrett

Pre-requisites:  
Co-requisites:

Module Aims
To provide students with a fundamental understanding of the principles underlying refraction and associated visual assessment. To develop an understanding of the effect of ametropia on unaided vision and to understand how this interacts with patient age and accommodation. To develop the ability to apply basic practical skills in refraction and visual assessment.
Outline Syllabus

The clinical portfolio is a completed portfolio of evidence of clinical experience and skills, to include practical examinations in retinoscopy and subjective refraction, logbook completion/submission, eye clinic attendance and reflection in semesters 1 and 2, model-eye work. Although this element does not contribute to the final mark for this module, this element must be passed.

Module Learning Outcomes

On successful completion of this module, students will be able to...

1. Apply the relevant basic visual optics underpinning ametropia, retinoscopy and subjective refraction.
2. Describe the clinical information gained from retinoscopy.
3. Describe the clinical information gained from visual acuity and subjective refraction.
4. Work together in small teams or with a partner.
5. Follow a plan of action to meet set targets.

Learning, Teaching and Assessment Strategy

The module is based on a lecture series and practical clinical sessions.
1. The fundamental principles relating to the correction of refractive error are covered at a basic level in formal lectures.
2. Clinical classes in Retinoscopy, Subjective Refraction and the measurement of Visual Acuity allow students to start to develop these skills at the earliest opportunity.
3. Students work in pairs in the clinical sessions. The pairs change during each clinical session to enable each student to work with other members of the group. This is to aid communication skills and to allow students to experience some of the variation encountered in examining human eyes.
